

Baseline instruments planned for the GOES-R series

James J. Gurka

**NOAA/ NESDIS, Office of Systems Development,
Silver Spring, Maryland, U.S.A.**

Timothy J. Schmit

**NOAA/ NESDIS, Office of Research and Applications,
Madison, Wisconsin, U.S.A.**

**With input from several authors from the 3rd GOES-R Users
Conference**

*Satellite Direct Readout Conference
December 2004*

GOES R Instruments

- Advanced Baseline Imager (ABI)
- Hyperspectral Environmental Suite (HES)
 - Disk Sounding
 - Severe Weather Mesoscale
 - Coastal Imager
- Geostationary Lightning Mapper (GLM)
- Solar Imaging Suite (SIS)
- Space Environment In Situ Suite (SEISS)

SYSTEM IMPROVEMENTS

GOES-I/P Instruments	GOES-R Notional Baseline
Imager 5 Channels	Advanced Baseline Imager (ABI) 16 Channels At Higher Spatial And Temporal Resolution
Multispectral Sounder 19 Sounding Bands N/A	Hyperspectral Environmental Suite (HES) 1500 Sounding Bands HiRes Imaging Bands
Solar X-Ray Imager Space Environmental Monitor	Solar Imaging Suite (SIS) Space Environmental In-Situ Suite (SEISS)
N/A	Geostationary Lightning Mapper (GLM)

The Advanced Baseline Imager:

	ABI	Current
Spectral Coverage		
	16 bands	5 bands
Spatial resolution		
0.64 μm Visible	0.5 km	Approx. 1 km
Other Visible/nearIR	1.0 km	n/a
Bands ($>2 \mu\text{m}$)	2 km	Approx. 4 km
Spatial coverage		
Full disk	4 per hour	Every 3 hours
CONUS	12 per hour	~4 per hour
Visible		
On-orbit calibration	Yes	No

Visible and near-IR channels on the ABI

The current GOES has only one visible band.

Weighting Functions for the IR channels on the ABI

Weighting functions for the standard atmosphere at a local zenith angle of 40 degrees.

ABI Bands

Future GOES Imager (ABI) Band	Wavelength Range (μm)	Central Wavelength (μm)	Sample Objective(s)
1	0.45-0.49	0.47	Daytime aerosol-over-land, Color imagery
2	0.59-0.69	0.64	Daytime clouds fog, insolation, winds
3	0.84-0.88	0.86	Daytime vegetation & aerosol-over-water, winds
4	1.365-1.395	1.38	Daytime cirrus cloud
5	1.58-1.64	1.61	Daytime cloud water, snow
6	2.235 - 2.285	2.26	Day land/cloud properties, particle size, vegetation
7	3.80-4.00	3.90	Sfc. & cloud/fog at night, fire
8	5.77-6.6	6.19	High-level atmospheric water vapor, winds, rainfall
9	6.75-7.15	6.95	Mid-level atmospheric water vapor, winds, rainfall
10	7.24-7.44	7.34	Lower-level water vapor, winds & SO ₂
11	8.3-8.7	8.5	Total water for stability, cloud phase, dust, SO ₂
12	9.42-9.8	9.61	Total ozone, turbulence, winds
13	10.1-10.6	10.35	Surface properties, low-level moisture & cloud
14	10.8-11.6	11.2	Total water for SST, clouds, rainfall
15	11.8-12.8	12.3	Total water & ash, SST
16	13.0-13.6	13.3	Air temp & cloud heights and amounts

Based on experience from:

Current GOES Imagers

MSG/AVHRR/
Sounder(s)

MODIS,
Aircraft, etc

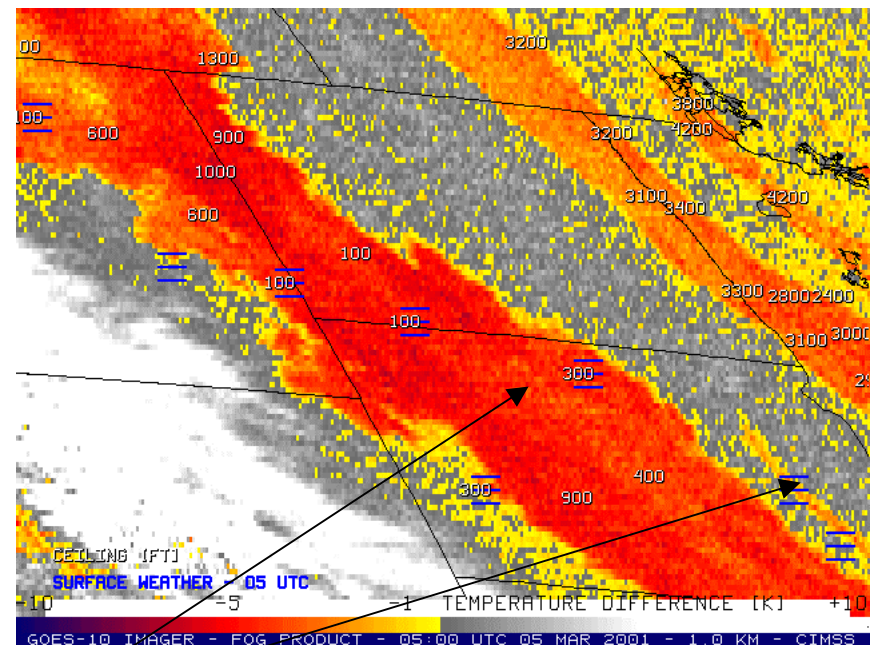

Fog -- Based on GOES Imager 3.9 μm

5 March 2001 - Nocturnal Fog/Stratus Over the Northern Plains

ABI 4 minus 11 μm Difference

GOES-10 4 minus 11 μm Difference

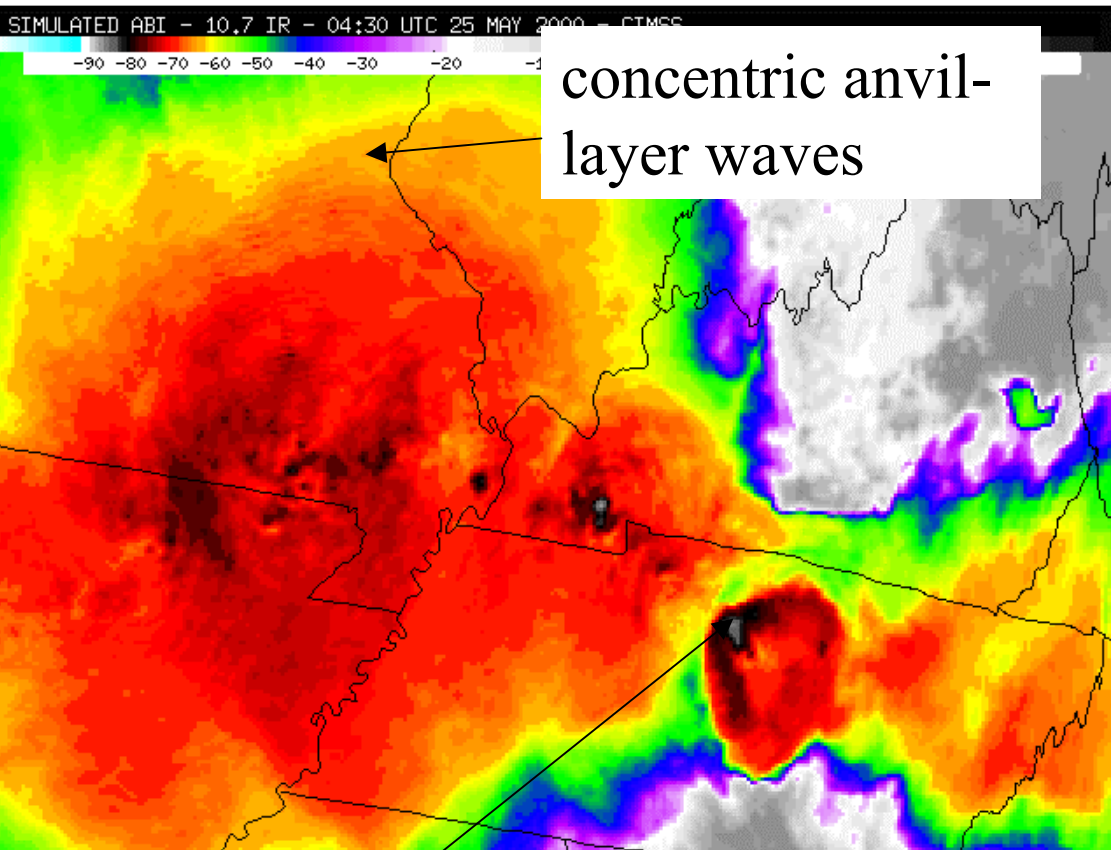

Both images are shown in the GOES projection.

Fog

UW/CIMSS

ABI image (from MODIS) shows greater detail in structure of fog.

Higher Spatial Resolution GOES Channels

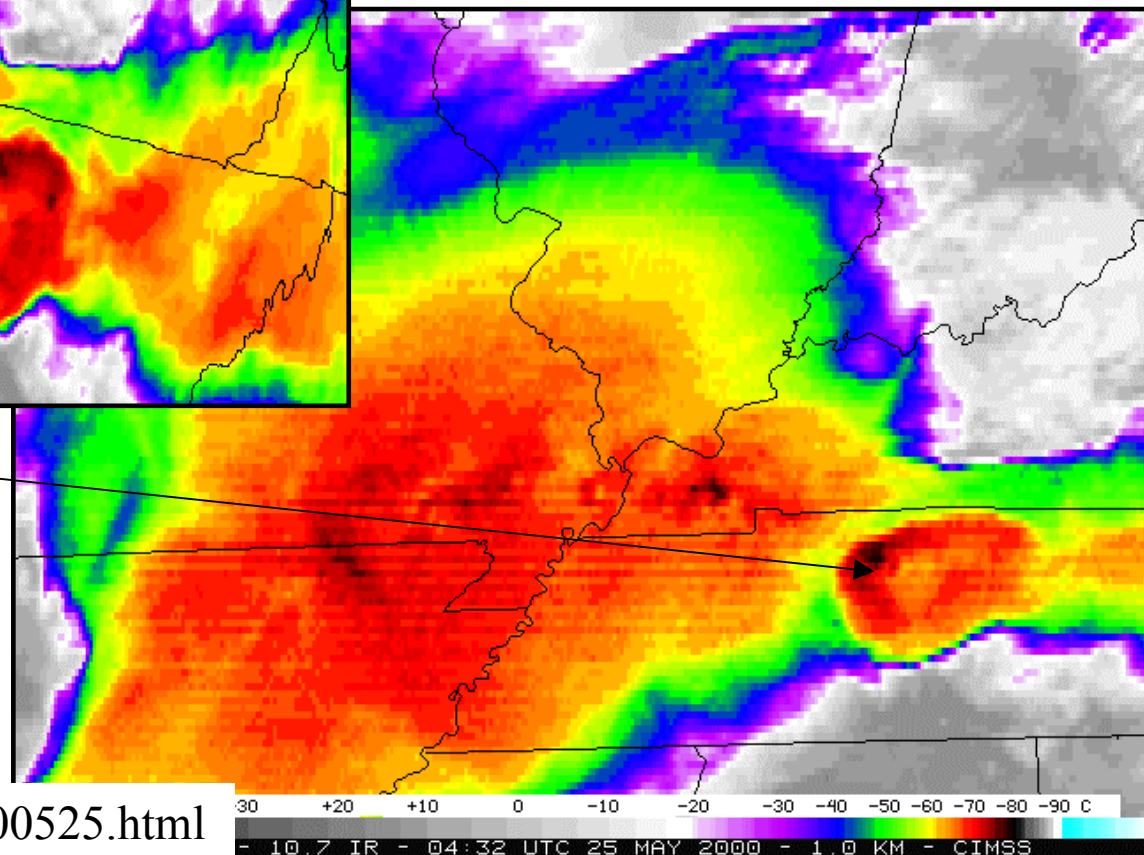

Simulated ABI
(from MODIS)

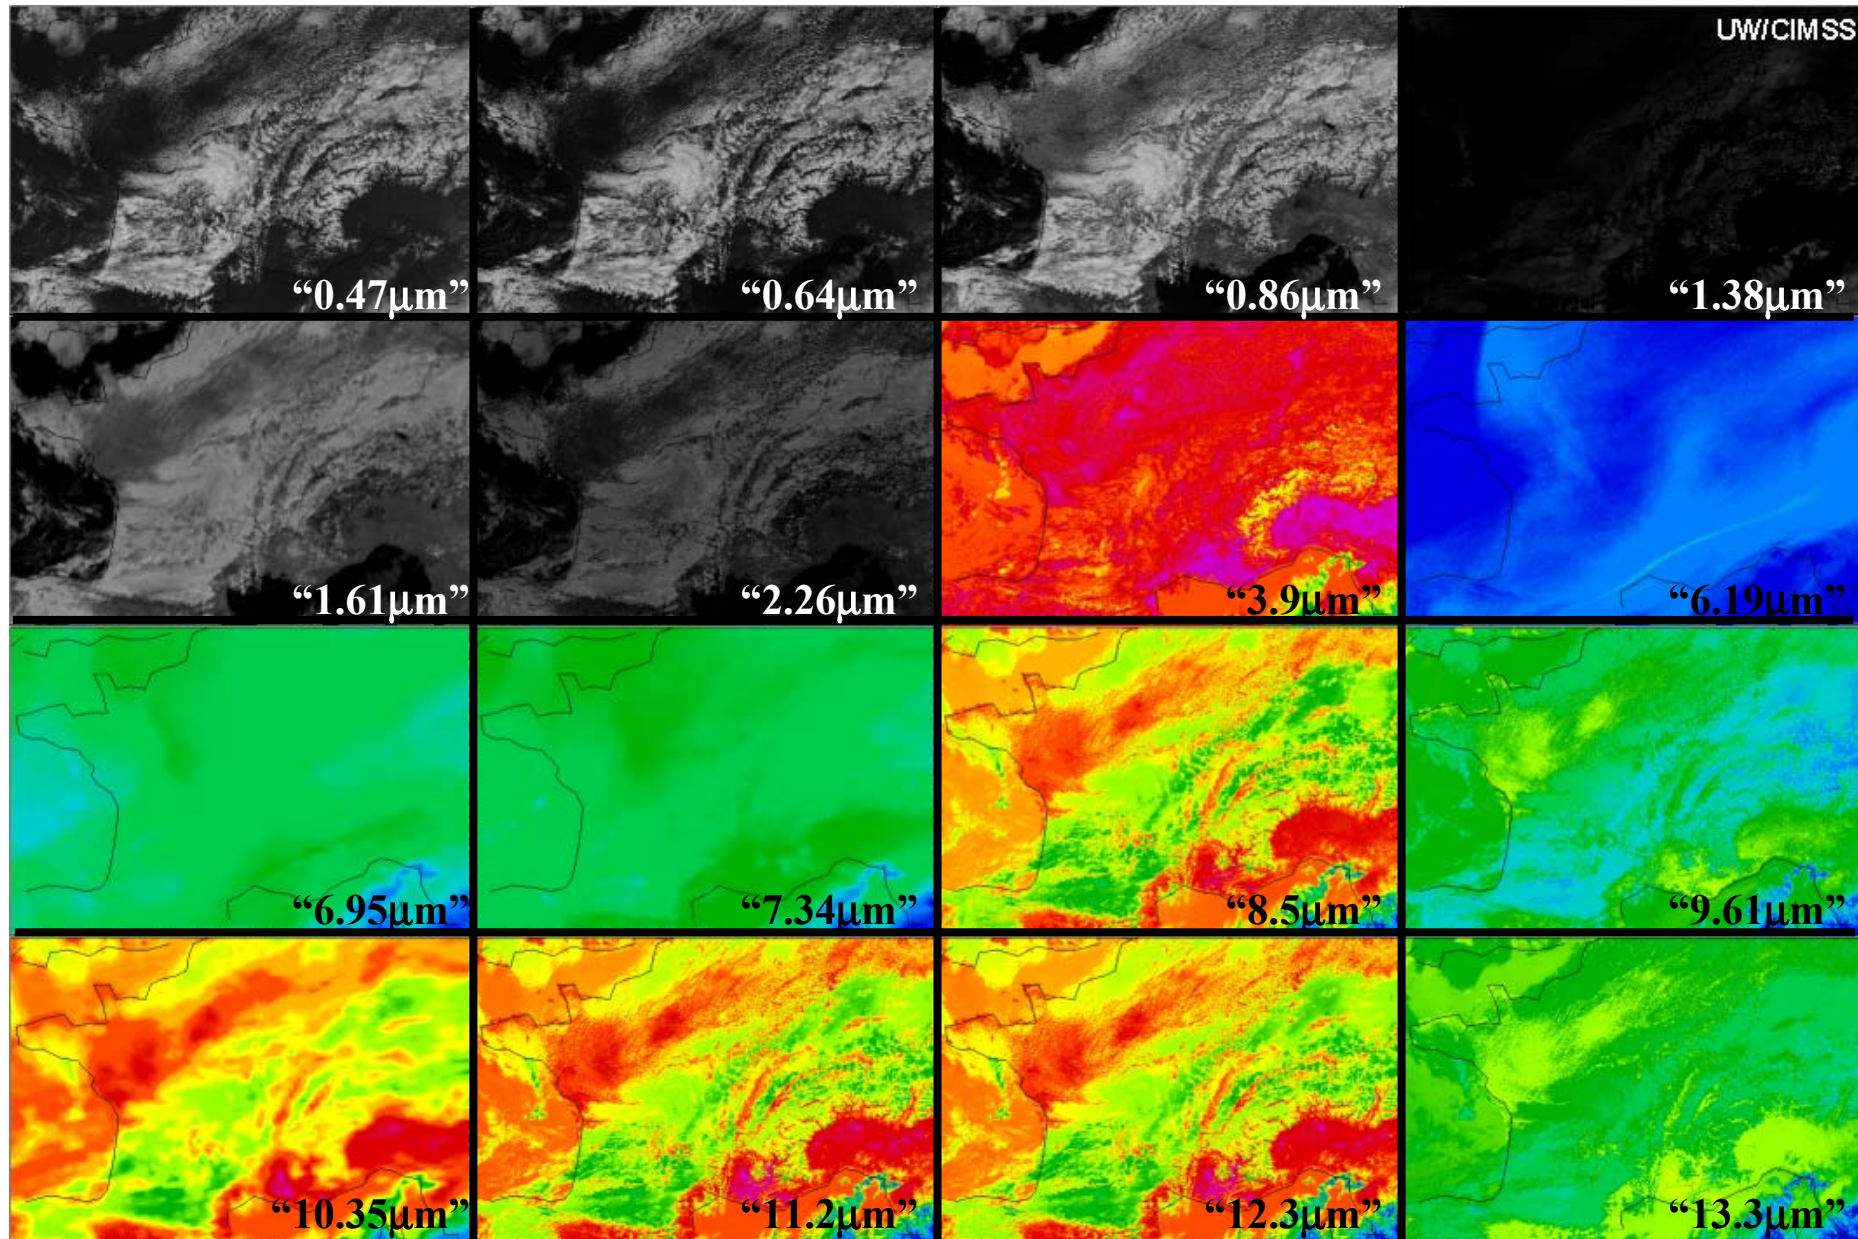

Enhanced “V”:
IR windows
May 25, 2000

Enhanced “V”

Actual GOES

Using MODIS, MET-8 and AIRS to simulate the spectral bands on the Advanced Baseline Imager (ABI)

Similar bands on the GOES-12 Imager

HES Tasks

- HES - Disk Sounding (HES-DS)
 - Provide **vertical moisture and temperature information**, and **other environmental data** with 10 km footprint size, over the near full disk in one hour.
- HES - Severe Weather / Mesoscale (HES-SW/M)
 - Provide vertical moisture and temperature information and other environmental data with 4 km footprint size, over a 1000 by 1000 km area in 4 minutes.

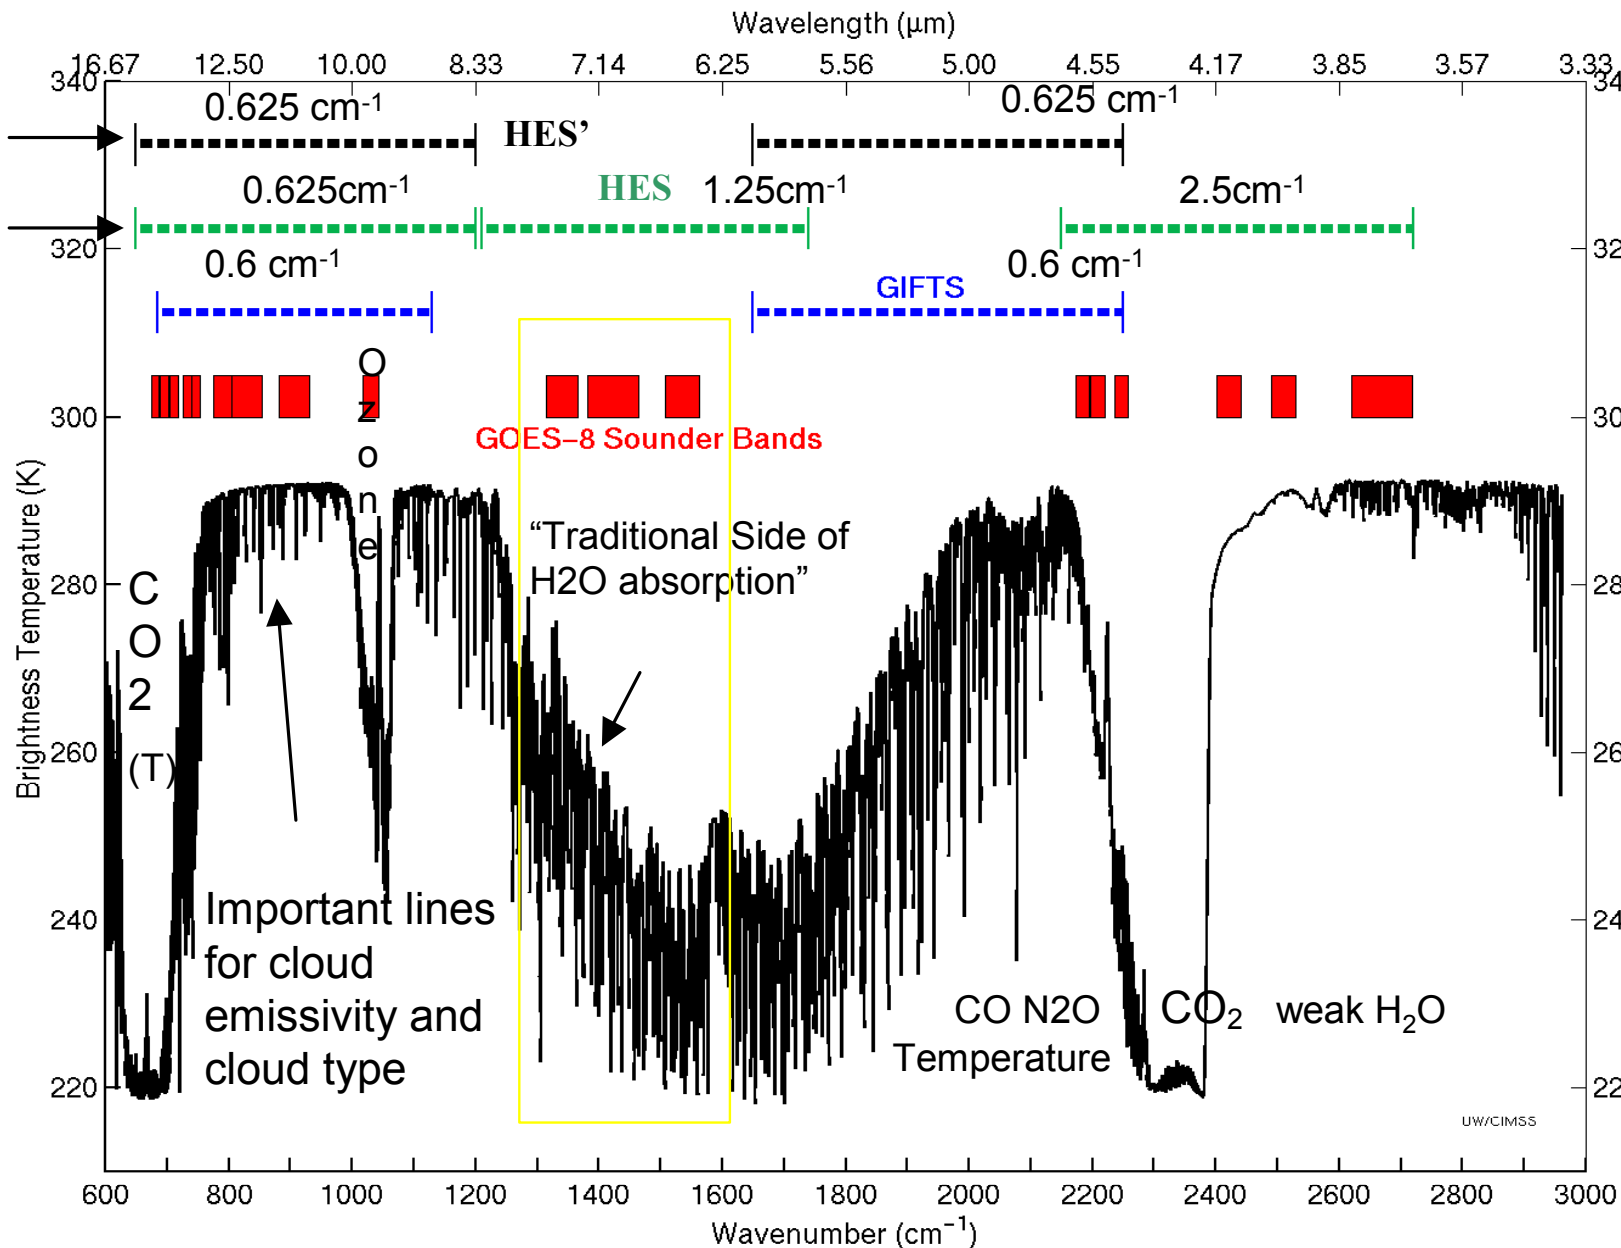

HES Tasks

- HES – Coastal Waters Imaging
 - 14 channels from 0.40 μm to 1.0 μm
 - Coverage within 400 km of coastline every 3 hours
 - 300 m footprint size
 - Improved observation of:
 - Ocean color
 - Harmful algal blooms
 - Sediment plumes
 - Chaotic coastal zone currents

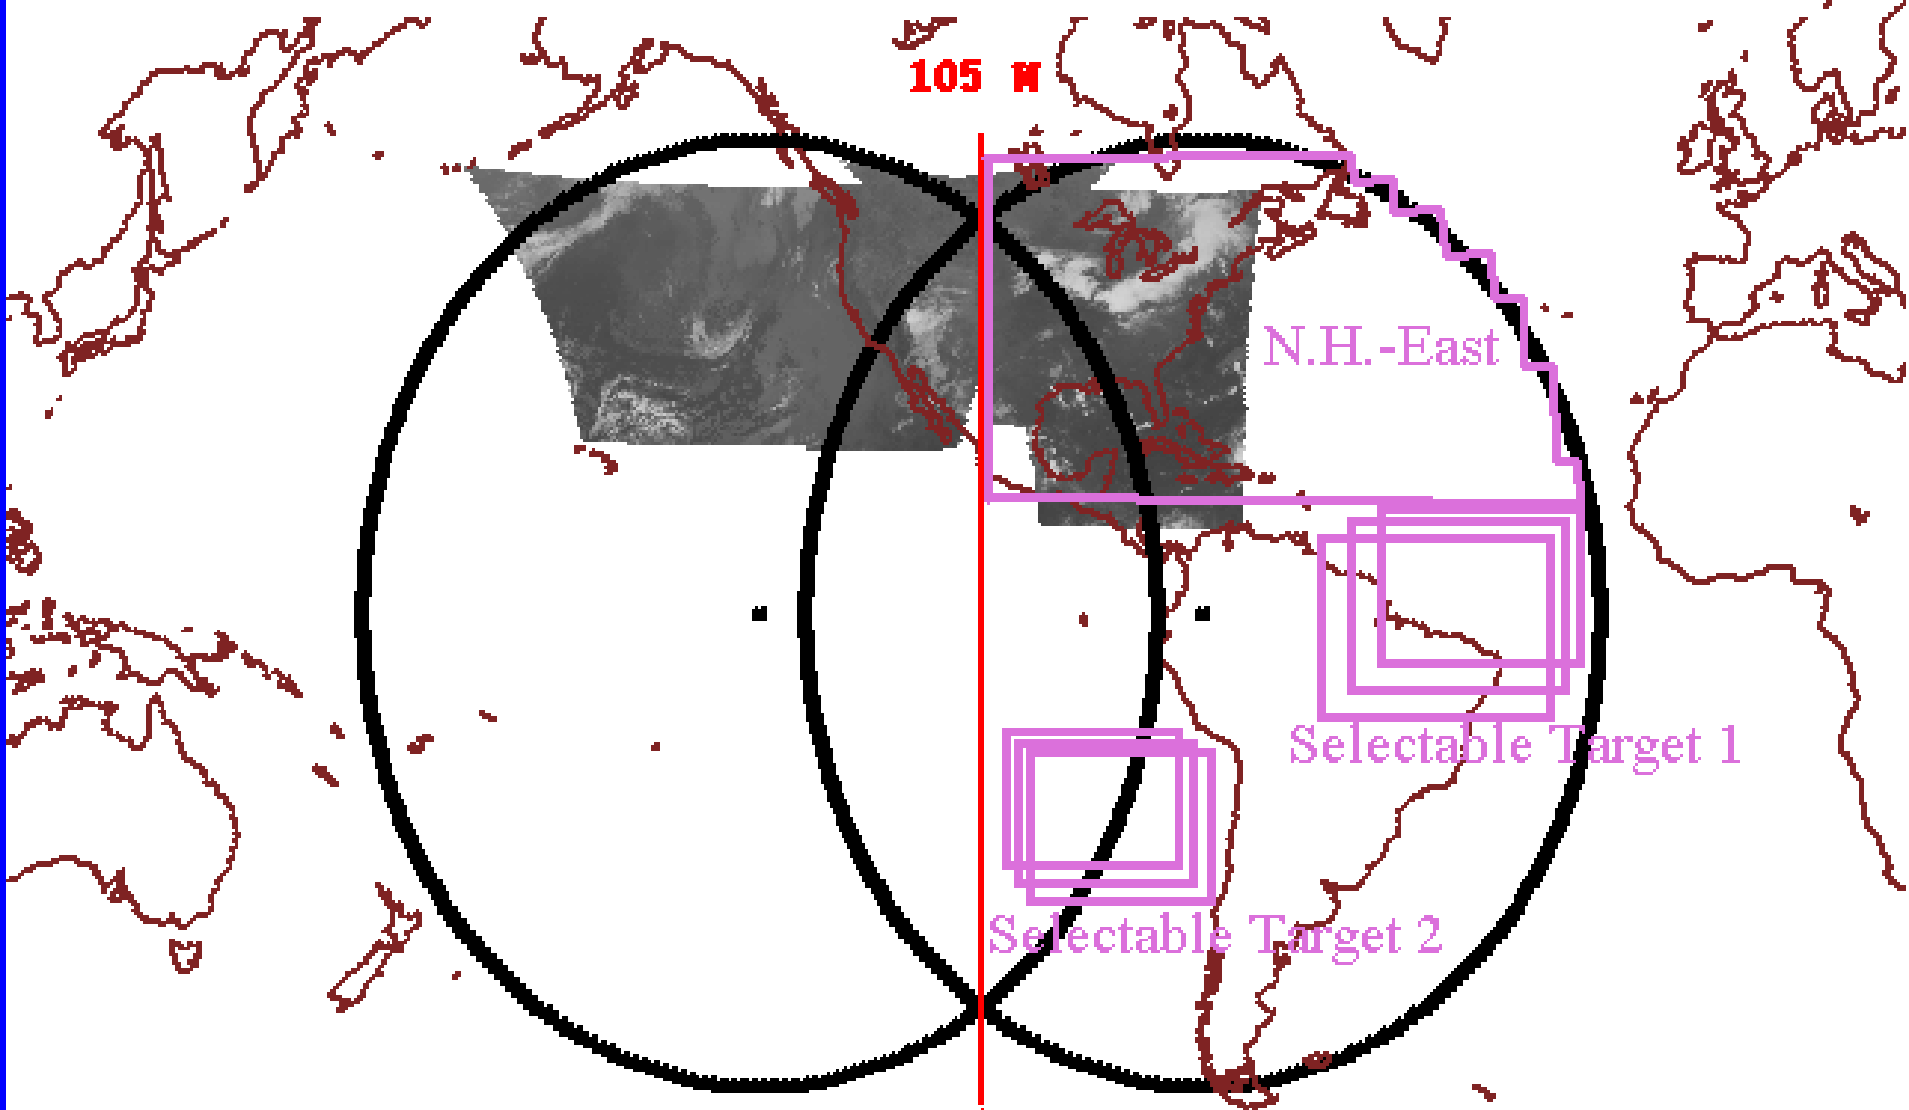

IR Spectral Coverage (DS or SW/M)

Example 1

Example 2

Hourly HES Scan Scenario -- Targeted Observations

Local Zenith Angle~62 Degrees

CURRENT HOURLY GOES SOUNDER COVERAGE

Sounder Comparison

(GOES-Current to HES-Req)

	<u>Current</u>	<u>Requirement</u>
Coverage Rate	CONUS/hr	Sounding Disk/hr
Horizontal Resolution		
-Sampling Distance	10 km	10 km
- Individual Sounding	30-50 km	10 km
Vertical resolution	~3 km	1 km
Accuracy		
Temperature	2 deg. K	1 deg. K
Relative Humidity	20%	10%

Moisture Weighting Functions

High spectral resolution advanced sounder will have **more and sharper weighting functions** compared to current **GOES** sounder. Retrievals will have better vertical resolution.

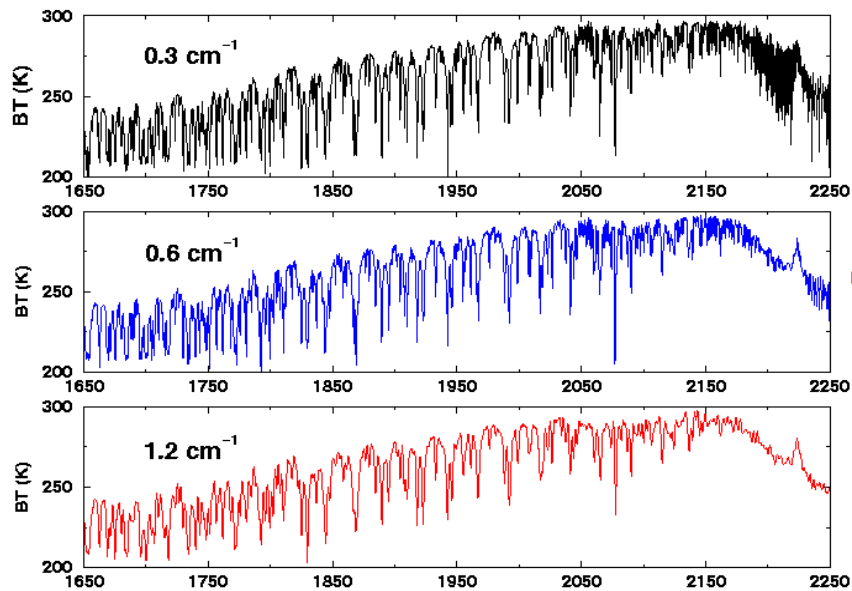

The 1km vertical temperature retrieval RMSE (left panel) and 2km vertical water vapor (RH) retrieval RMSE (right panel) from HES LW only, SMW only, LW + SMW, and current GOES sounder. 463 independent profiles distributed globally are included in the retrieval statistics; TRD noise is used in the simulation.

Spectral resolution (0.3, 0.6, 1.2 cm⁻¹) impact on T/q retrieval

LW

MW

SIS/SEISS IMPROVEMENTS

- GOES-R Space Weather Instruments
 - Space Environmental In Situ Suite (SEISS)
 - proton, electron, and heavy ion fluxes
 - Solar Imaging Suite (SIS)
 - solar X-ray flux magnitude
 - solar EUV flux from 5 to 129 nm
 - coronal holes locations
 - solar flares
 - coronal mass ejections
 - Magnetometers
- GOES-R Improvements
 - Solar X-ray image dynamic range, resolution, and sensitivity
 - EUV measurements using 8 channels (5 channels) In improved modeling of ionosphere and thermosphere
 - Medium energy radiation environment responsible for spacecraft charging

GEOSTATIONARY LIGHTNING MAPPER

- Detects Total Strikes:
In Cloud, Cloud To
Cloud, And Cloud To
Ground
 - Compliments Today's Land
Based Systems That Only
Measures Cloud To Ground
(About 15% Of The Total
Lightning)
- Increased Coverage Over Oceans
And Lands
 - Currently No Ocean Coverage, And
 - Limited Land Coverage In Dead
Zones
- Parameters
 - Hemispheric Or CONUS Coverage
 - 10 Km Spatial Resolution
(1 Km Goal)

Lightning Sensing from GEO

- Climate Monitoring
- Storm Development
- Ice-phase precipitation estimates
- Severe Weather Now-casting
- Data assimilation and model inputs
- Atmospheric chemistry

GEO

User Services

User Services on current GOES satellites, including the **Data Collection System (DCS)**, the **Low Rate Information Transmission (LRIT)**, and **Search and Rescue (SAR)** will continue through the GOES-R Series.

The GOES **DCS** is a communications relay system that handles information gathered by remotely located Data Collection Platforms (DCPs)

Summary

The great amount of information from the GOES-R series will offer not only a **continuation of current products** and services, but also vastly **improved or new capabilities**.

These products, based on validated requirements, will cover a wide range of phenomena. This includes applications relating to: **weather, climate, ocean, coastal zones, land, hazards, solar and space**.

The **Advanced Baseline Imager (ABI)**, the **Hyperspectral Environmental Suite (HES)**, the **Geo Lightning Mapper (GLM)**, the **space and solar instrument suites (Solar Imaging Suite (SIS), Space Environment In-Situ Suite (SEISS))** and the **user services** on GOES-R will enable much improved monitoring compared to current capabilities.
